

SUNDANCE

DAYLIGHT/TUNGSTEN

Convert HMI to Tungsten by simple lamp change. Same ballast, same lighthead. Replace the metal halogen (HMI) daylight lamp with our special ceramic high performance tungsten lamp

- Both lamps offer the highest possible output - 80 lumen per watt - four times as much as halogen
- Both lamps guarantee professional color rendition: CRI > 92.

THE PORTABLE STUDIO

Precision Focusing

- Fantastic light output and focusing range beyond any comparable fresnel system
- Surgically precise beam
- Perfectly even light distribution
- Accepts all classic Dedolight accessories (barndoors, filters, imagers...)

Gentle Soft Light

- Single purpose dedicated design
- Its actual light source is in the focal center of the soft box - double the light output compared to a soft box in front of a fresnel
- Smooth and even light distribution on the diffuser
- Choice of many different sizes of Softboxes

 **SERIES 200**

SUNDANCE

DAYLIGHT/TUNGSTEN

SERIES 200

Not enough time?
Not enough hands?
No way to carry all the extra equipment?
No room for creativity?
Just getting the job done?

What a pity!

Our answer:

THE SUNDANCE KIT

Make your creative dreams come true in better images. Imagine an interview set-up. Two highly tuneable lights, one gentle high power soft source.

Daylight Situation

How to match available light

- Balance with a gentle fill
- Create a fine tuned backlight
- An accent for the background

Tungsten Situation

Sometimes clean, factual and onobstrusive
Sometimes atmospheric - bringing out the character of human expression

- The precision and utmost control of accents
- The subtle tenderness of transparent shadows from a tuneable soft source

Day - Tungsten light interchange

Unplug the metal halogen (HMI) daylight lamp
Replace it with our special ceramic high performance tungsten lamp. The same electronic ballast drives both types of lamps.

- Both lamps offer the highest possible output – 80 lumen per watt – four times as much as halogen
- Both lamps guarantee professional colour rendition: CRI > 92.

Dimming

The daylight lamp can be dimmed from 200 W to 100 W without noticeable change in colour temperature. The ceramic tungsten lamp dims to 125 W.

The focusing lighthead (DLH200D)

Its optics are based on the award winning, patented double aspheric system

- Fantastic output and focusing range beyond any comparable fresnel system
- Surgically precise beam without stray light
- Perfectly even light distribution within the beam (no hot spots, no circles, no discoloration)
- Accepts all classic dedolight accessories (barn doors, filters, imagers...)

The Softlight (DLH200S)

The DLH200S is a single purpose, dedicated design

- Its actual light source is in the focal center of the softbox which provides double the light output compared to a soft box in front of a Fresnel
- Provides even light distribution on the diffuser as opposed to the hotspot commonly encountered with soft boxes in front of other light sources
- Fits different sizes of soft boxes without adapters

The portable Studio

How portable?

The entire set can be packed into a soft case that usually gets accepted as cabin baggage.

Want to check it in? These guys can destroy anything? Not this kit - it's indestructible!

Less than half the size and weight of any of our competitors.

The MAXIMUM in versatility, control, precision and light character

The MINIMUM of weight, size and set-up
